

Abstract of the Disclosure:

A gas-heated dishwasher includes a gas burner for heating the rinsing liquid and drying dishes, which is suitable for drying dishes and heating the rinsing liquid in an efficient way,

5 while, at the same time, making it possible for a worktop to be placed on top of the dishwasher, the gas burner is embodied and disposed in the motor chamber so that it heats at least one closed tubular heating body filled with a fluid during a sub-program dry section and heats the rinsing fluid during the

10 sub-program sections when the rinsing fluid is used.
